

Keep Your Exports Moving by Proactively Managing the Process Using Integration Point Export Management

Are the ever-changing regulatory requirements from multiple agencies making the delivery of your goods to international customers challenging? Integration Point Export Management addresses those challenges and provides companies with a web-based tool that eliminates issues with classification, screening, licensing requirements, license management and reporting in one integrated step.

Export Management

Export management and compliance requires organizations to proactively consider and manage all the pieces of the export process regardless of the country of origin or the final destination of the goods. Integration Point Export Management provides a web-based environment for organizations to not only manage export processes but to also manage compliance to regulations from agencies or governments around the globe.

A Software-as-a-Service (SaaS) technology, Integration Point Export Management allows organizations to:

- Classify products to country specific export controls
- Access real-time, up-to-date trade content for product classification, tariff preferences, export restriction lists, and other global reference data
- View export license requirements and restrictions per export
- Validate existing license requirements and license amounts automatically
- Screen export shipments against over 80 international lists with more than 68,000 entities to prevent inadvertent shipment of controlled products to banned entities or embargoed countries
- Determine which export documentation is needed based on country requirements
- Create necessary export documentation and retain copies for future use
- Integrate with current ERP systems to allow for export screening at any point during the export process

Export Declarations

Regardless of the exporting country, export declarations are required. Sometimes each country has its own export declaration that is required, while others share declarations under a broader Customs documentation requirement. No matter how the export declaration data is required, Integration Point Export Management can assist. Integration Point Export Management meets export declaration requirements for:

- US Automated Export System (AES)
- EU Export Control System (ECS)
- MX Maquiladora/IMMEX
- And additional countries

Integration Point Management

Integration Point Export Management includes web-based tools for:

- Export Classification (ECN/ECCN)
- License Determination and Management
- Restricted Party Screening
- Deemed Exports
- Document Determination and Management

All Your Trade Needs, One Integrated Solution
