

Leverage Mexican and US Trade Opportunities with Integration Point Mexican Trade

Integration Point has a holistic solution to fully employ US and Mexican Trade needs in order to best maximize cross-border operational efficiencies, duty optimization across the US and Mexico, and supply-chain speed.

Integration Point Mexican Trade Management

Integration Point Mexican Trade Management is fully web-based and built to handle multiple facilities from a single system. The Integration Point solution can be accessed from anywhere in the world to perform reporting and analysis on Maquiladora/IMMEX operations. Users can easily generate SAAI formatted pedimentos and invoices for integration with Customs brokers. Integration Point Mexican Trade Management assists in the generation of various forms and documents including facturas, INEGI, pedimentos, Annual Maquila Report, inventory reconciliation and FAST documentation. Integration Point Mexican Trade also assists with the compliance of the Anexo 4 under the IMMEX Decree as well as the previous Anexo 24.

Cross-Border Efficiencies

The Integration Point Mexican Trade and US Foreign-Trade Zone solutions were built upon the same Global Trade software model that has proven to have the most robust audit and reconciliation capabilities in the market. No only will the user gain significant efficiencies when cross-docking between the US and Mexico, but full visibility of all activity is now possible.

Benefits of Automation

The Integration Point Mexican Trade implementation team has the most diverse set of industry skills in the market today. Our technology provides the ability to integrate across your supply chain. Our inter-facility integration not only improves operational efficiencies, but also helps ensure that your organization is positioned to best leverage US and Mexican Trade Programs. Integration Point Mexican Trade Management enables companies to:

- Eliminate the tedious and time-consuming manual reconciliation and interface processes
- Validate and process both import and export transactions separately
- Interface with their own ERP system to transmit data daily and cut down on the amount of manual data entry
- Compare data against hundreds of checks and create custom validation checks for transaction data

Manage Multiple Facilities from One System

Integration Point Mexican Trade Management provides users with the capability to manage all company facilities across the globe from one web-based platform. The Integration Point solution also provides multi-lingual capabilities to facilitate communication throughout the organization.

All Your Trade Needs, One Integrated Solution

Integration Point Maquiladora/IMMEX Operations: Technology Differentiators

Scalable Technology

Integration Point's Global Trade Software powers some of the most complex, high-volume Fortune 500 and Global 500 companies. After a detailed review of our technology, we are confident that your technology team will agree Integration Point is the right solution for your company.

Web-enabled Anytime/Anywhere Access

Our web-based solution allows you to securely access your data from the office, an off-site plant location, or anywhere in the world.

Seamless Integration to All Business Systems

No matter how many business units, systems, or facilities you manage, Integration Point can bring all of your data together under one Global Trade system to best manage your trade and compliance strategy. Data hooks are already available for SAP, Oracle, JD Edwards, MAPICS, BPCS, QAD (MFG/PRO), PkMS, and many other business systems.

Application Service Provider (ASP)

Integration Point can host the software at our secure data center. This option allows any size company to take advantage of the large scale technology used by Fortune 500 companies without requiring a significant investment in hardware, operating software, and technical staff.

Open Access to Data

There are times when you need to perform detailed analysis of your trade information for special business needs or requests from Customs. Integration Point allows you to access your data and generate dynamic reports on demand using our web-based OpenQuery tool.
